

Group A – Assignment T-diagram:

Ferdinand van Walree, 3874389

Matthew Swart, 5597250

Grade: 7

We found that there were three things wrong with our submission:

- The formal specification of the typesystem isn't exactly correct. We knew this beforehand, because we didn't know how to correctly do it. We did however make it understandable in a formal manner.
- Too few more complex diagrams. We don't allow for quite a few combinations of the complex diagrams. Some we considered not feasible, because the in the output diagrams would be overlapping. For the others we simply didn't have enough time.
- We forgot too remove certain type error messages in case of disallowed compositional diagrams.

We do meet all the rest of the requirements. We also added haddock documentation and gave a thorough explanation of our implementation.
